

JS Program Execution

How does JS works behind the scene

JavaScript Execution Context

1. Global Execution Context
2. Function Execution Context
3. Eval Execution Context

'this' keyword is used to access global executive context.

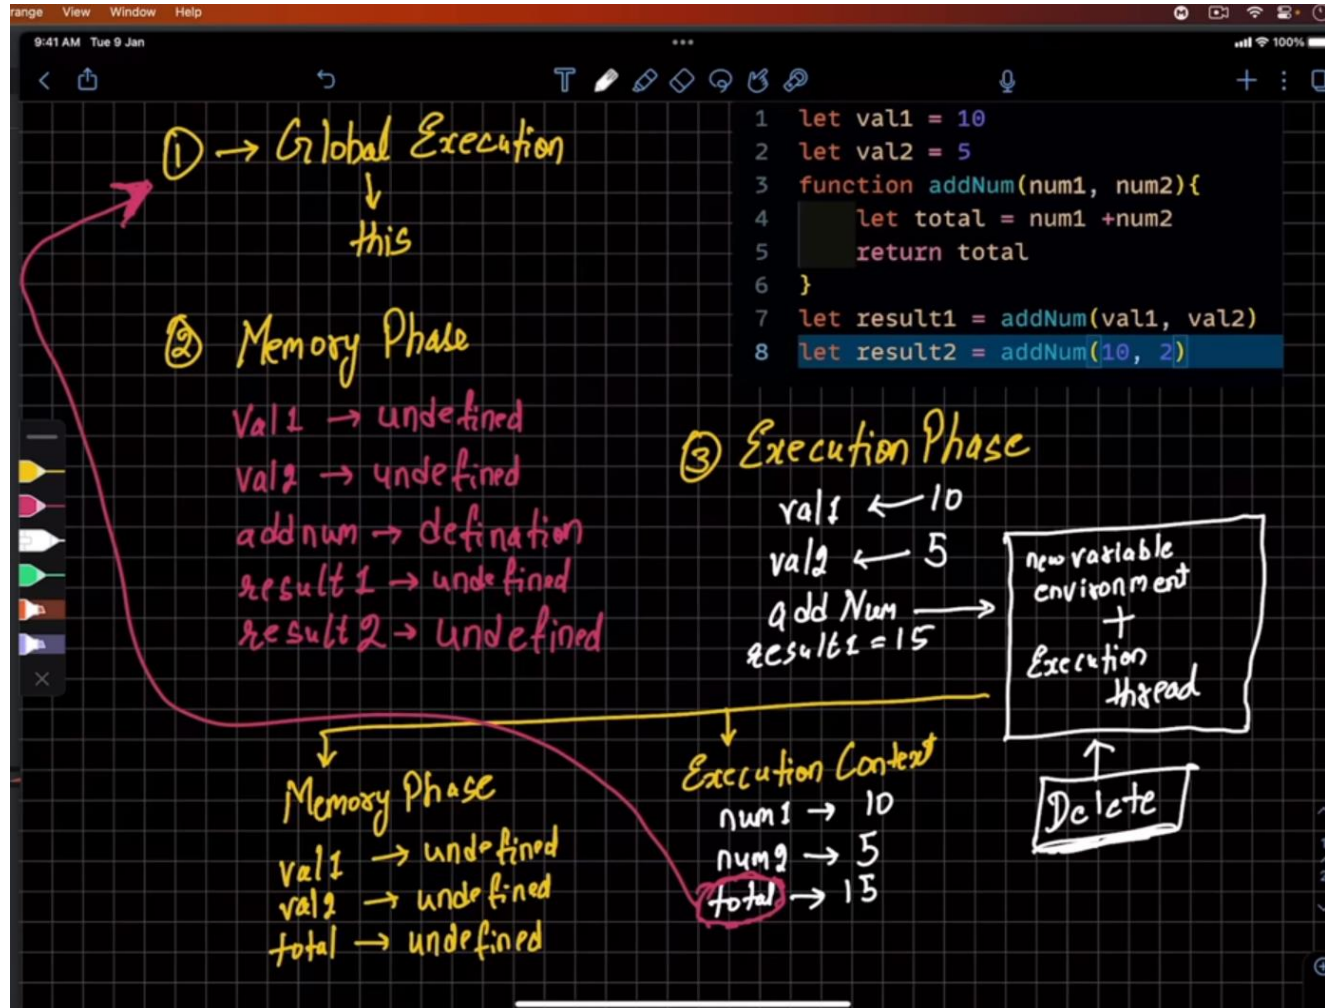

JS programs are executed in 2 phases.

1. Memory Creation Phase aka Creation Phase.

Memory for declared variables are created in this phase.

2. Execution Phase

How function call is executed 1 ?

How function call is executed 2 ?
